Data Management

Image management is integrated into SCANCO Medical's software suite to aid your productivity. Measurement data can be moved freely between disk and magnetic tape according to study needs, with the database keeping track at all times. Data safety is enhanced by separating raw and reconstructed scan data archives onto different media.

Periodic backup of your measurement database and scanner settings is a 1-click operation.

Key features:
- Archiving and retrieval of images between disk and tape and network storage (NFS)
- Tape management
- 1-click back-up of all databases and programs
